GLADESVILLE PRIMARY SCHOOL No 5066
ASTHMA POLICY

Rationale:
• Asthma affects up to one in four primary aged children, one in seven teenagers and one in ten adults. It is important therefore for all staff members to be aware of asthma, its symptoms and triggers, and the management of asthma in a school environment.

Aims:
• To manage asthma and asthma sufferers as effectively and efficiently as possible at school.

Implementation:
• Asthma attacks involve the narrowing of airways making it difficult to breathe. Symptoms commonly include difficulty breathing, wheezy breathing, dry and irritating cough, tightness in the chest and difficulty speaking.
• Children and adults with mild asthma rarely require medication; however severe asthma sufferers may require daily or additional medication (particularly after exercise).
• Professional development will be provided annually for all staff on the nature, prevention and treatment of asthma attacks. Such information will also be displayed on the staffroom wall.
• All students with asthma must have an up-to-date (annual) written asthma management plan consistent with Asthma Victoria’s requirements completed by their doctor or paediatrician. Appropriate asthma plan proformas are available at www.asthma.org.au
• Asthma plans will be attached to the student’s records for reference.
• Parents/guardians are responsible for ensuring their children have an adequate supply of appropriate asthma medication (including a spacer) with them at school at all times.
• The first aid staff member will be responsible for checking reliever puffer expiry dates.
• A nebuliser pump will not be used by the school staff unless a student’s asthma management plan recommends the use of such a device.
• Care must be provided immediately for any student who develops signs of an asthma attack.
• Children suffering asthma attacks should be treated in accordance with their asthma plan.
• If no plan is available children are to be sat down, reassured, administered 4 puffs of a shaken reliever puffer (blue canister) delivered via a spacer – inhaling 4 deep breaths per puff, wait 4 minutes, if necessary administer 4 more puffs and repeat the cycle. An ambulance must be called if there is no improvement after the second 4 minute wait period, or if it is the child’s first known attack. Parents must be contacted whenever their child suffers an asthma attack.

Evaluation:
• This policy will be evaluated in line with School Council cyclical review of policy documents and school and DEECD priorities.

This policy was last ratified by School Council in June 2013.
